**AUGUST 2018**

The City of Newton Department of Public Works-Water Division will be performing Lead & Copper Sampling on September 5, 2018 and is looking for residents to participate. Participants will be given a sample bottle on Tuesday September 4, 2018 and asked to fill that sample bottle with the first draw of water in the morning from the kitchen faucet, leave the bottle outside the front door to be picked up that morning by Water Division personnel. In order to qualify in the Lead & Copper sampling program, the water service to your residence needs to be verified with the Water Division that it was installed in the early 1900's. Under this program there will be 15 primary sites that will be tested and 10 alternate sites that could be tested should a primary site become unavailable at the time of testing. Should you want to participate please call the Utilities Division office at 617-796-1640 to register or have any questions answered about the program.
