Matthew Duranleau, EIT

Re: Grove Street at Woodland Road
Traffic Signal Warrant Memorandum
Riverside Redevelopment
Newton, Massachusetts

VHB has conducted a traffic signal warrant evaluation at the intersection of Grove Street and Woodland Road in Newton, Massachusetts. The warrant evaluation has been conducted due to a request from the City of Newton during the planning review process for the proposed redevelopment at Riverside Station. The proposed project at Riverside Station is expected to consist of approximately 1,025,000 square feet of new development including a mix of retail, office, residential, and hotel space in addition to maintaining the existing parking supply for commuters to the MBTA station. A Transportation Impact and Access Study (TIAS) was filed with the City of Newton in December 2019 and a revised trip generation memorandum was filed in February 2020.

This memorandum summarizes the evaluation of a traffic signal at the intersection of Grove Street at Woodland Road. The intersection is located approximately ½-mile north of the proposed Riverside redevelopment and will serve as one of the primary approaches to the Site from neighborhoods to the north and east in Newton. Therefore, the traffic signal warrant evaluation has been conducted with respect to the 2020 Existing, 2029 No Build, and 2029 Build Conditions.

Existing Conditions

Grove Street and Woodland Road currently intersect at an unsignalized four-way intersection under all-way stop control. Grove Street intersects from the north and south and Woodland Road intersects from the east and west. All approaches consist of one general-purpose lane and are under stop control. Stop signs are provided on the both sides of each approach and an overhead flashing-red beacon is also provided on each approach to supplement the signage. Sidewalks are provided on both sides of all approaches and crosswalks are located across each approach. Wheelchair ramps with tactile warning strips are provided on the approaches to each crosswalk. Land use around the intersection consists of Lasell College on the southeast corner, the United Parish Church of Auburndale on the northwest corner, and residential properties on the northeast and southwest corners. In addition, the Williams Elementary School is located on Grove Street approximately 400 feet south of the intersection.

Traffic Volumes

To conduct the traffic signal warrant analysis, traffic volumes were collected at the intersection of Grove Street and Woodland Road on Wednesday, March 11, 2020. Turning movement counts were conducted at the intersection for thirteen consecutive hours between 6:00 AM and 7:00 PM. The traffic count data is included in the Attachments to this memorandum.

To determine if the March 2020 traffic counts represent typical roadway conditions, the counts were compared against the June 2018 peak period turning movement counts conducted at this location for the December 2019 TIAS. Based on this comparison, the March 2020 traffic counts are approximately 7-percent lower during the weekday morning peak period and 16-percent lower during the weekday evening peak period than the June 2018 counts. This difference in traffic volumes is most likely because of the shutdowns caused by the COVID-19 outbreak in Massachusetts. While both Lasell College and Newton public schools were still open the day the traffic counts were conducted (March 11, 2020), general traffic patterns had already begun to be impacted by the shutdowns. Therefore,

to provide an accurate representation of average conditions at this intersection, the March 2020 traffic counts have been adjusted upward based on the comparison with the June 2018 counts. The volume comparison and adjustment calculations are included in the Attachments to this memorandum.

To be consistent with the analyses presented in the TIAS, a future year of 2029 was used to develop the No Build and Build Conditions. To develop the 2029 No Build Condition, the existing traffic volumes were grown using an annual growth rate of 0.5-percent and by applying volumes associated with the background projects presented in the TIAs. To develop the 2029 Build Condition, the daily distribution of Site-generated volumes was applied to the 2029 No Build Condition traffic volumes based on the Institute of Transportation Engineers (ITE) Trip Generation Manual¹. More details on the development of the No Build and Build Conditions are included in the Riverside redevelopment TIAs and the revised trip generation memorandum.

Traffic Signal Warrant Analysis

Federal Highway Administration (FHWA) has established criteria for evaluating the need for traffic signal control at an intersection. Several warrants, published in the Manual on Uniform Traffic Control Devices (MUTCD)², provide guidelines for determining the need for a signal based on such factors as traffic volume, pedestrian volume, progressive movement of traffic, vehicular delay, and others. While satisfaction of one or more of these warrants alone does not necessarily justify installation of a traffic signal, warrants in combination with capacity analysis, crash analysis, and a study of intersection safety provide valuable criteria for evaluating the need for a traffic signal.

There are nine warrants defined in the MUTCD. The warrants consider the roadway geometry, traffic volume entering the intersection, travel speeds, pedestrian activity, and special considerations such as proximity to schools and active railroad grade crossings. Even if these warrants are satisfied, other considerations such as traffic flow progression, sight distance, and physical constraints must be considered before pursuing traffic signal control.

Traffic volumes were evaluated for following three traffic volume-based warrants:

- **Warrant 1 (Eight Hour Vehicular Volume)** – Warrant 1 is based on any eight hours of a day where the traffic entering the intersection reaches a threshold that warrants considering signal control.
- **Warrant 2 (Four Hour Vehicular Volume)** – Warrant 2 is for any four hours of a day.
- **Warrant 3 (Peak Hour)** – Warrant 3 is for the peak hour of any given day.

As noted above, the signal warrant analyses were conducted based on the 2020 Existing, 2029 No Build, and 2029 Build Conditions. The signal warrant analyses were based on average 85th-percentile speeds of under 40 miles per hour on Grove Street and Woodland Road based on floating speed observations. Volume thresholds for warranting traffic signal controls are lower for roadways with 85th percentile speeds greater than 40 miles per hour compared to roadways with 85th percentile speeds lower than or equal to 40 miles per hour due to the higher travelling speeds for vehicles and the greater time and distances needed for a vehicle to come to a stop.

Table 1 presents the results of the three-traffic volume-based warrant analyses completed for this review at the intersection of Grove Street and Woodland Road. The signal warrant analyses worksheets are provided in the Attachments to this memorandum. It should be noted that to provide conservative analyses, the volumes used for the warrants include all left-turn, through, and right-turn movements on each approach.

¹ Trip Generation Manual, 10th Edition, Institute of Transportation Engineers, Washington D.C., 2017.

² Manual on Uniform Traffic Control Devices, 2009 Edition; U.S. Department of Transportation Federal Highway Administration, Washington DC, December 2009.

Table 1 Grove Street at Woodland Road Traffic Signal Warrants Analysis Summary

Condition	Warrant 1 Met? (Eight-Hour Volume Warrant)	Warrant 2 Met? (Four-Hour Volume Warrant)	Warrant 3 Met? (Peak-Hour Volume Warrant)
2020 Existing Conditions	No	No	No
2029 No Build Conditions	No	No	No
2029 Build Conditions	No	No	No

As shown in Table 1, none of the volume-based warrants are met at the intersection of Grove Street at Woodland Road under the 2020 Existing, 2029 No Build, or 2029 Build Conditions.

In addition to the three warrants described above, there are six other traffic signal warrants outlined in the MUTCD. While none of the six additional warrants are met at this intersection, the warrants are listed below with the reasoning why they do not apply at this location:

- **Warrant 4 (Pedestrian Volume)** – This warrant is not applicable as the current number of pedestrian crossings at this location does not meet the minimum number of crossings required to meet any of the cases for Warrant 4. The minimum threshold to meet this warrant is 107 people crossing per hour for four hours or 133 people crossing per hour for one hour. It is not anticipated that this warrant will be met in the future either as the total number of pedestrian crossings would need to more than double over four hours to meet Warrant 4, which is not anticipated due to the Riverside redevelopment.
- **Warrant 5 (School Crossing)** – While the intersection is close to the Williams Elementary School, this warrant is not applicable as there are currently adequate gaps in the traffic stream during the period when schoolchildren are crossing due to the all-way stop control nature of the intersection.
- **Warrant 6 (Coordinated Signal System)** – This warrant is not applicable as neither Grove Street nor Woodland Road currently contain an adjacent signalized intersection within 1,000 feet that could become part of a coordinated traffic signal system.
- **Warrant 7 (Crash Experience)** – Warrant 7 is satisfied when five collisions correctable by signalization occur over the most recent 12 months. A review of crash data determines that this warrant is not applicable as only one crash occurred at the study area intersection in 2017, the most recent full crash data is available from the Massachusetts Department of Transportation.
- **Warrant 8 (Roadway Network)** – This warrant is not applicable as the study intersection is not the common intersection of two major routes.
- **Warrant 9 (Intersection Near a Grade Crossing)** – This warrant is not applicable as the intersection is not near an active grade crossing.

Conclusion

VHB has conducted a traffic signal warrant evaluation at the intersection of Grove Street and Woodland Road. The traffic signal warrant evaluation was conducted with respect to the existing conditions and the future conditions with and without the proposed Riverside redevelopment project. Based on the analyses presented above, none of the three volume-based warrants or any of the other six warrants are met at this intersection. Therefore, a traffic signal is not currently warranted at the intersection of Grove Street and Woodland Road nor will it be warranted in the future.

Grove Street at Woodland Road
Existing Traffic Volume Comparison

Note: Counts conducted on Wednesday, March 11, 2020 at the beginning of the Coronavirus-related shutdowns. Local schools and Lasell College were in session this day, but general traffic was beginning to go decrease (full school shut-downs and bar/restaurant closures did not begin until the following week).

Volumes compared to June 2018 counts to provide a comparison of "normal" traffic conditions.

Wednesday March 11, 2020, is right when travel habits began to change, and travel patterns may have shifted over the course of the day as people responded to the outbreak in real-time. As shown, AM volumes are down ~7% and PM volumes are down ~16% compared to 2018 counts. Therefore, the adjustment factor will be scaled as the day progresses to account for the real-time adjustment in travel patterns on the day of the traffic counts.

2009 MUTCD

TRAFFIC SIGNAL WARRANT ANALYSIS (VOLUME BASED)

Intersection: **Grove Street at Woodland Street**

Major Street Direction: Northbound-Southbound 

Year: 2020 **Condition:** Existing Conditions

Operating speed on major roadway:		25 mph	Required approach volumes	
Number of approaches:		4	Minimum*	Adjusted Minimum**
Warrant 1 EIGHT-HOUR VEHICULAR VOLUME				
Warrant 1A	MINIMUM VEHICULAR VOLUME (8 hours of day)			
Major Street :	1 Lane(s) on each approach		500	500
Minor Street :	1 Lane(s) on each approach		150	150
Warrant 1B	INTERRUPTION OF CONTINUOUS TRAFFIC (8 hours of day)			
Major Street :	1 Lane(s) on each approach		750	750
Minor Street :	1 Lane(s) on each approach		75	75
80 PERCENT SATISFACTION OF WARRANT 1A AND WARRANT 1B			Warrant 1A	Warrant 1B
Major Street :	1 Lane(s) on each approach		400	600
Minor Street :	1 Lane(s) on each approach		120	60

Warrant 2 FOUR HOUR VEHICULAR VOLUME		If "verify" indicated, see Figure 4C-1 or 4C-2.
Major Street : 1 Lane(s) on each approach Minor Street : 1 Lane(s) on each approach		25 = accuracy of regression equations

Warrant 3 PEAK HOUR VOLUME		If "verify" indicated, see Figure 4C-3 or 4C-4.
Major Street : 1 Lane(s) on each approach Minor Street : 1 Lane(s) on each approach		25 = accuracy of regression equations

Hour	Entering Vol. Minor Road+	Entering Vol. on Major Road		Tot. Ent. Vol. On Major Rd	Meets the following volume-based warrants?

					No	No	No	No	No
					Warrants Met?	1	2	3	
					No	No	No	No	No

Note: Volumes based on 2020 Existing Conditions (adjusted based on 2018 distributions to reflect average conditions)

Note: Minor Road volumes for Woodland Road westbound approach (includes all left, through, and right-turning traffic)

Note: Grove Street approach volumes includes all left, through, and right-turning vehicles to be conservative

*From the criteria described for the warrant in the MUTCD.

**If the operating speed is higher than 40mph then the volumes can be adjusted to 70%. (If no adjusted minimum, the minimum from the previous column is shown)

+If more than one approach, report the approach that has the higher volume.

NON VEHICULAR-VOLUME-BASED WARRANTS

Hour	# of Ped Crossings	Meets?
6:00 - 7:00 AM	8	No
7:00 - 8:00 AM	10	No
8:00 - 9:00 AM	51	No
9:00 - 10:00 AM	10	No
10:00 - 11:00 AM	15	No
11:00 - 12:00 AM	18	No
12:00 - 1:00 PM	29	No
1:00 - 2:00 PM	18	No
2:00 - 3:00 PM	25	No
3:00 - 4:00 PM	53	No
4:00 - 5:00 PM	26	No
5:00 - 6:00 PM	52	No
6:00 - 7:00 PM	28	No
Warrant Met?		No

*107 pedestrians per hour for four hours is the minimum threshold

Warrant 5, School Crossing*: No

See MUTCD for details.

*School crossing warrant does not apply as current all-way stop control provides sufficient gaps in traffic

Warrant 6, Coordinated Signal System: No

See MUTCD for details.

Warrant 7, Crash Experience: No

of accidents "correctable by signalization" occurring in the last 12 months:
(threshold is 5 crashes correctable by signalization)

Total crashes
(from MassDOT
crash portal):

2015 3

2016 1

2017 1

Avg. 2

Warrant 8, Roadway Network: No

See MUTCD for details.

Warrant 9, Grade Crossing: No

See MUTCD for details.
