FROM: Robert J. Michaud, P.E. – Managing Principal
Courtney E. Jones, P.E. – Senior Transportation Engineer

RE: **Supplemental Sight Line Assessment**
Proposed Development – The Residences at Kessler Woods
Lagrange Street – Newton, MA

MDM Transportation Consultants, Inc. (MDM) has prepared this technical memorandum to document compliance with applicable sight line criteria for the proposed crosswalk and driveway for The Residences at Kessler Woods on Lagrange Street in Newton, Massachusetts. This evaluation updates our prior sight line evaluation as documented in the July 23, 2014 traffic impact assessment (TIA) to reflect updated site plans and topographic survey/field measurements along Lagrange Street.

Key findings of the preliminary traffic assessment are as follows:

- *Measured Travel Speeds.* The 85th percentile travel speeds along Lagrange Street adjacent to the Site are 36 mph for the eastbound travel direction and 37 mph for the westbound travel direction. These travel speeds present the appropriate basis upon which driveway and crosswalk sight lines are compared to criteria set by the American Association of State Highway and Transportation Officials (AASHTO).
- *Adequate Driveway Sight Lines.* The existing available sight lines along Lagrange Street exceed AASHTO's recommended Stopping Sight Distance (SSD) criteria for the regulatory speed limit and observed 85th percentile travel speeds. Proposed driveway and roadside grading along the north side of Lagrange Street will also provide intersection sight distance (ISD) that meets or exceeds the minimum recommended and ideal recommended sight line criteria for the posted speed limit and 85th percentile travel speeds. MDM recommends that any new plantings (shrubs, bushes) or physical landscape features to be located within driveway sight lines be maintained at a height of 2 feet or less above the finished roadway grade to ensure unobstructed lines of sight; site plans by others will be updated to reflect this recommendation.

- *Adequate Crosswalk Visibility.* The existing available sight lines to the center of the proposed crosswalk along Lagrange Street will exceed AASHTO's recommended SSD criteria for the regulatory speed limit as well as for the observed 85th percentile travel speeds along Lagrange Street.

Measured Travel Speeds

Vehicle speeds were obtained for the Lagrange Street eastbound and westbound travel directions using a radar-based automatic traffic recorder (ATR) in May 2014. **Table 1** summarizes the regulatory posted speed and observed average and 85th percentile speeds for Lagrange Street adjacent to the Site. Field data are provided in the **Attachments**.

**TABLE 1
SPEED STUDY RESULTS – LAGRANGE STREET**

<u>Travel Direction</u>	<u>Posted Speed Limit</u>	<u>Travel Speed</u>	
		<u>Average¹</u>	<u>85th Percentile²</u>
Eastbound	30	32	36
Westbound	30	33	37

¹Arithmetic Mean.

²The speed at or below which 85 percent of the vehicles are traveling.

As summarized in **Table 1**, the mean (average) travel speed on Lagrange Street traveling eastbound is 32 mph and traveling westbound is 33 mph. The 85th percentile travel speed was observed to be 36 mph for the eastbound travel direction and 37 mph for the westbound travel direction. The observed 85th percentile travel speeds therefore provide an appropriate basis for determining sight line requirements for the proposed driveway and crosswalks locations.

Driveway Sight Line Evaluation

An evaluation of sight lines was conducted at the site driveway location providing access to the proposed residential building and proposed crosswalk along Lagrange Street to ensure that minimum recommended sight lines are available. The evaluation documents sight lines under proposed conditions for vehicles as they relate to Lagrange Street with comparison to recommended guidelines.

The American Association of State Highway and Transportation Officials' (AASHTO) standards¹ reference two types of sight distance which are relevant along Lagrange Street: stopping sight distance (SSD) and intersection sight distance (ISD). Sight lines for critical vehicle movements were compared to minimum SSD and ISD recommendations for the regulatory and observed 85th percentile travel speeds in the Site driveway and crosswalk proximity.

Stopping Sight Distance

Sight distance is the length of roadway visible to the motorist to a fixed object. The minimum sight distance available on a roadway should be sufficiently long enough to enable a below-average operator, traveling at or near a regulatory speed limit, to stop safely before reaching a stationary object in its path, in this case, a vehicle exiting onto Lagrange Street or a pedestrian within the crosswalk. The SSD criteria are defined by AASHTO based on design and operating speeds, anticipated driver behavior and vehicle performance, as well as physical roadway conditions. SSD includes the length of roadway traveled during the perception and reaction time of a driver to an object, and the distance traveled during brake application on wet level pavement. Adjustment factors are applied to account for roadway grades when applicable.

SSD was estimated in the field using AASHTO standards for driver's eye (3.5 feet) and object height equivalent to the taillight height of a passenger car (2.0 feet) for the eastbound and westbound Lagrange Street approaches to the site driveway and crosswalk. **Table 2** presents a summary of the available SSD and AASHTO's recommended SSD based on posted and ambient travel speeds along Lagrange Street.

¹ *A policy on Geometric Design of Highways and Streets*, American Association of State Highway and Transportation Officials (AASHTO), 2011.

TABLE 2
STOPPING SIGHT DISTANCE SUMMARY
LAGRANGE STREET APPROACHES TO SITE DRIVEWAY/ CROSSWALK

Approach/ Travel Direction	Available SSD	AASHTO Recommended ¹		
		Posted Speed Limit ²	Average Travel Speed ³	85 th Percentile Travel Speed ⁴
<i>Proposed Site Driveway</i>				
Eastbound	290± Feet	190 Feet	205 Feet	245 Feet
Westbound	360± Feet	190 Feet	215 Feet	255 Feet
<i>Proposed Crosswalk</i>				
Eastbound	280± Feet	190 Feet	205 Feet	245 Feet
Westbound	355± Feet	190 Feet	215 Feet	255 Feet

¹Recommended sight distance based on AASHTO, A Policy on Geometric Design of Highways and Streets. Based on driver height of eye of 3.5 feet to object height of 2.0 feet.

²Regulatory posted speed = 30 mph

³Avg observed travel speeds = 32 mph EB and 33 mph WB

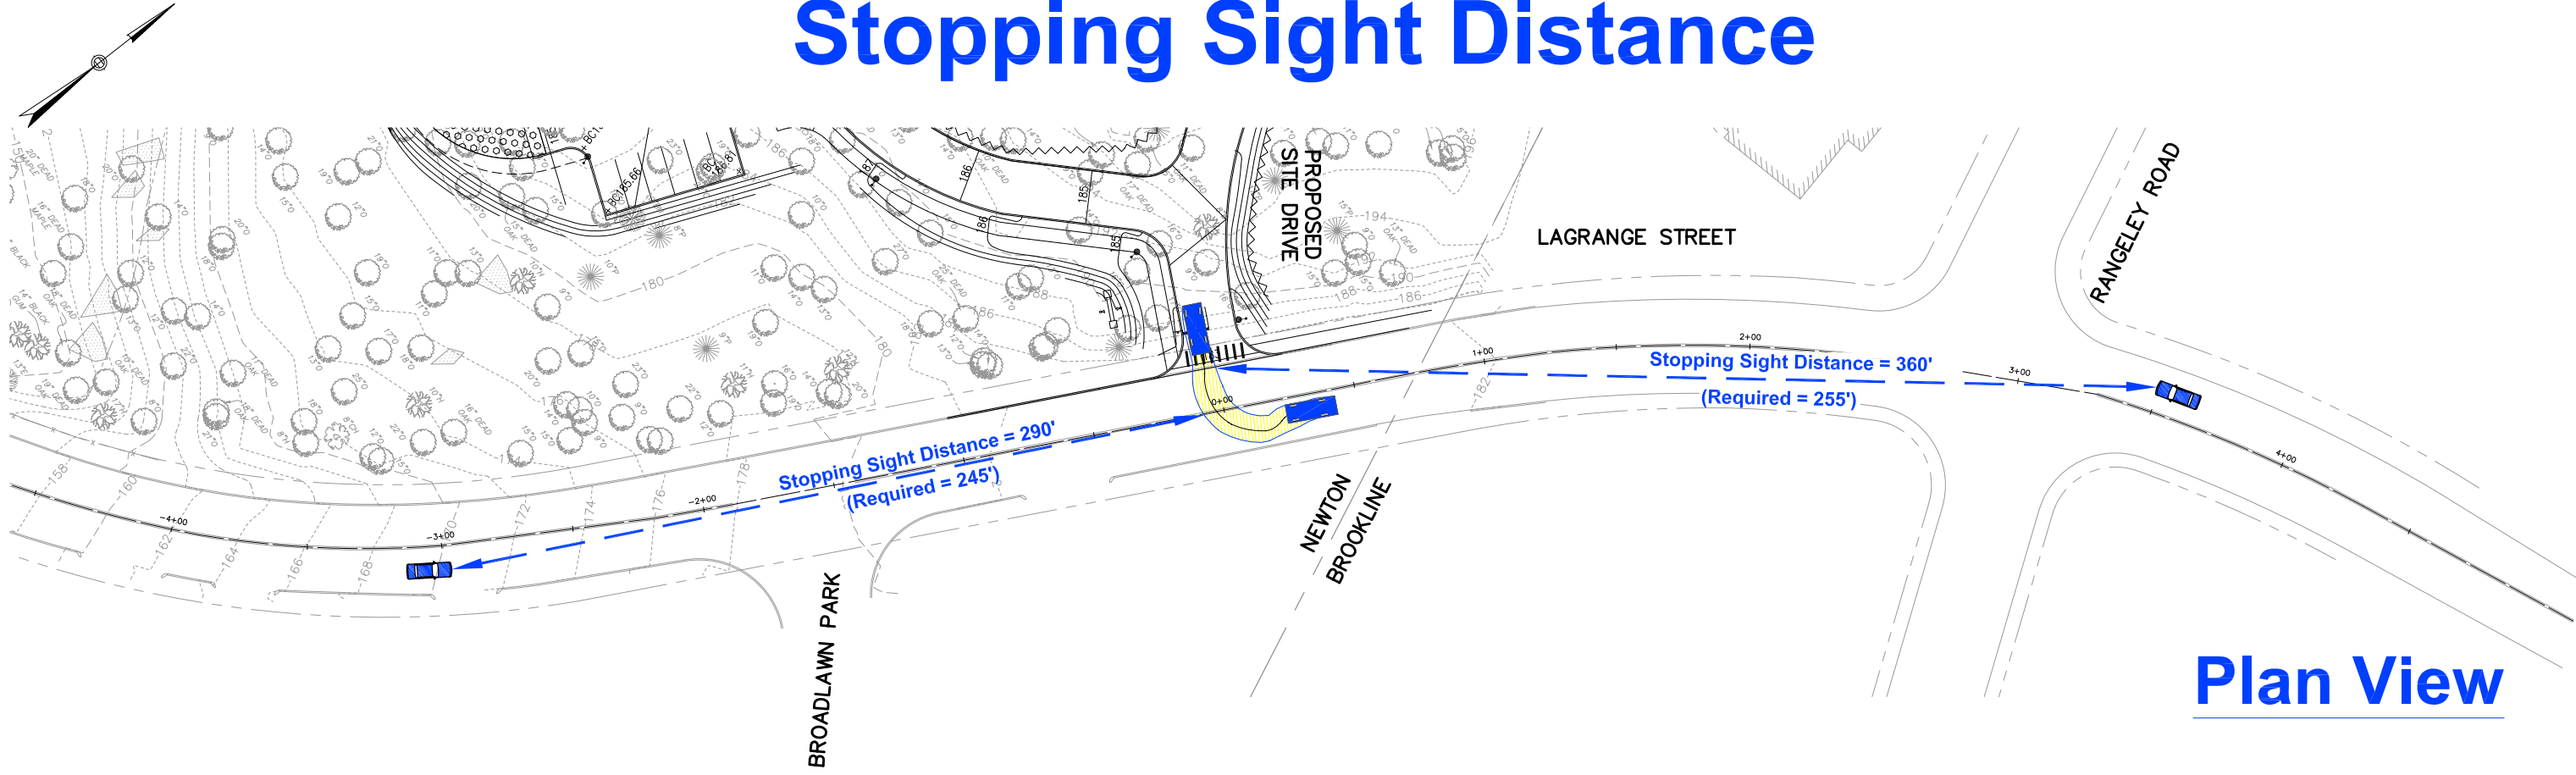

⁴85th percentile observed travel speeds = 36 mph EB and 37 mph WB

As summarized in **Table 2**, analysis results indicate that the existing available sight lines exceed AASHTO's recommended SSD criteria for both travel directions along Lagrange Street for the 85th percentile travel speeds. The SSD profiles for the eastbound and westbound Lagrange Street approaches to the proposed site driveway and proposed crosswalk, based on available topographical survey and field measurements, is shown in **Figure 1** and **Figure 2**. Stopping sight distance calculations are provided in the **Attachments**.

Intersection Sight Distance

Clear sight lines provide sufficient sight distance for a stopped driver on a minor-road approach to depart from the intersection and enter or cross the major road. As stated under AASHTO's Intersection Sight Distance (ISD) considerations, "...If the available sight distance for an entering ...vehicle is at least equal to the appropriate stopping sight distance for the major road, then drivers have sufficient sight distance to avoid collisions...To enhance traffic operations, intersection sight distances that exceed stopping sight distances are desirable along the major road." AASHTO's ISD criteria are defined into several "cases". In this case, the proposed site driveway approach to Lagrange Street is proposed to be under STOP sign control and the ISD in question relates to the ability to turn left or turn right onto Lagrange Street.

Date: October 2014
Project No. 765

*Figure 2
Stopping Sight Distance Analysis
at Crosswalk*

Available ISD was estimated in the field using AASHTO standards for driver’s eye (3.5 feet), object height (3.5 feet) and decision point (14.5 feet from the edge of travel lane) for the eastbound and westbound directions along Lagrange Street. **Table 3** presents a summary of the available ISD for the departure from the proposed site driveway and AASHTO’s recommended minimum and ideal ISD.

**TABLE 3
INTERSECTION SIGHT DISTANCE SUMMARY
SITE DRIVEWAY DEPARTURE TO LAGRANGE STREET**

Approach/ Travel Direction	Available SSD ³	AASHTO Minimum ¹		AASHTO Ideal ²
		Posted Speed Limit ⁴	85 th Percentile Travel Speed ⁵	85 th Percentile Travel Speed
Looking East	410± Feet	190 Feet	255 Feet	355 Feet
Looking West	400± Feet	190 Feet	245 Feet	400 Feet

¹Recommended sight distance based on AASHTO, A Policy on Geometric Design of Highways and Streets. Based on driver height of eye of 3.5 feet and an object height of 3.5 feet and adjustments for roadway grade if required. Minimum value as noted represents SSD per AASHTO guidance.

²Based on AASHTO criteria, with a time gap of 7.5 seconds for left turns and 6.5 seconds for right turns.

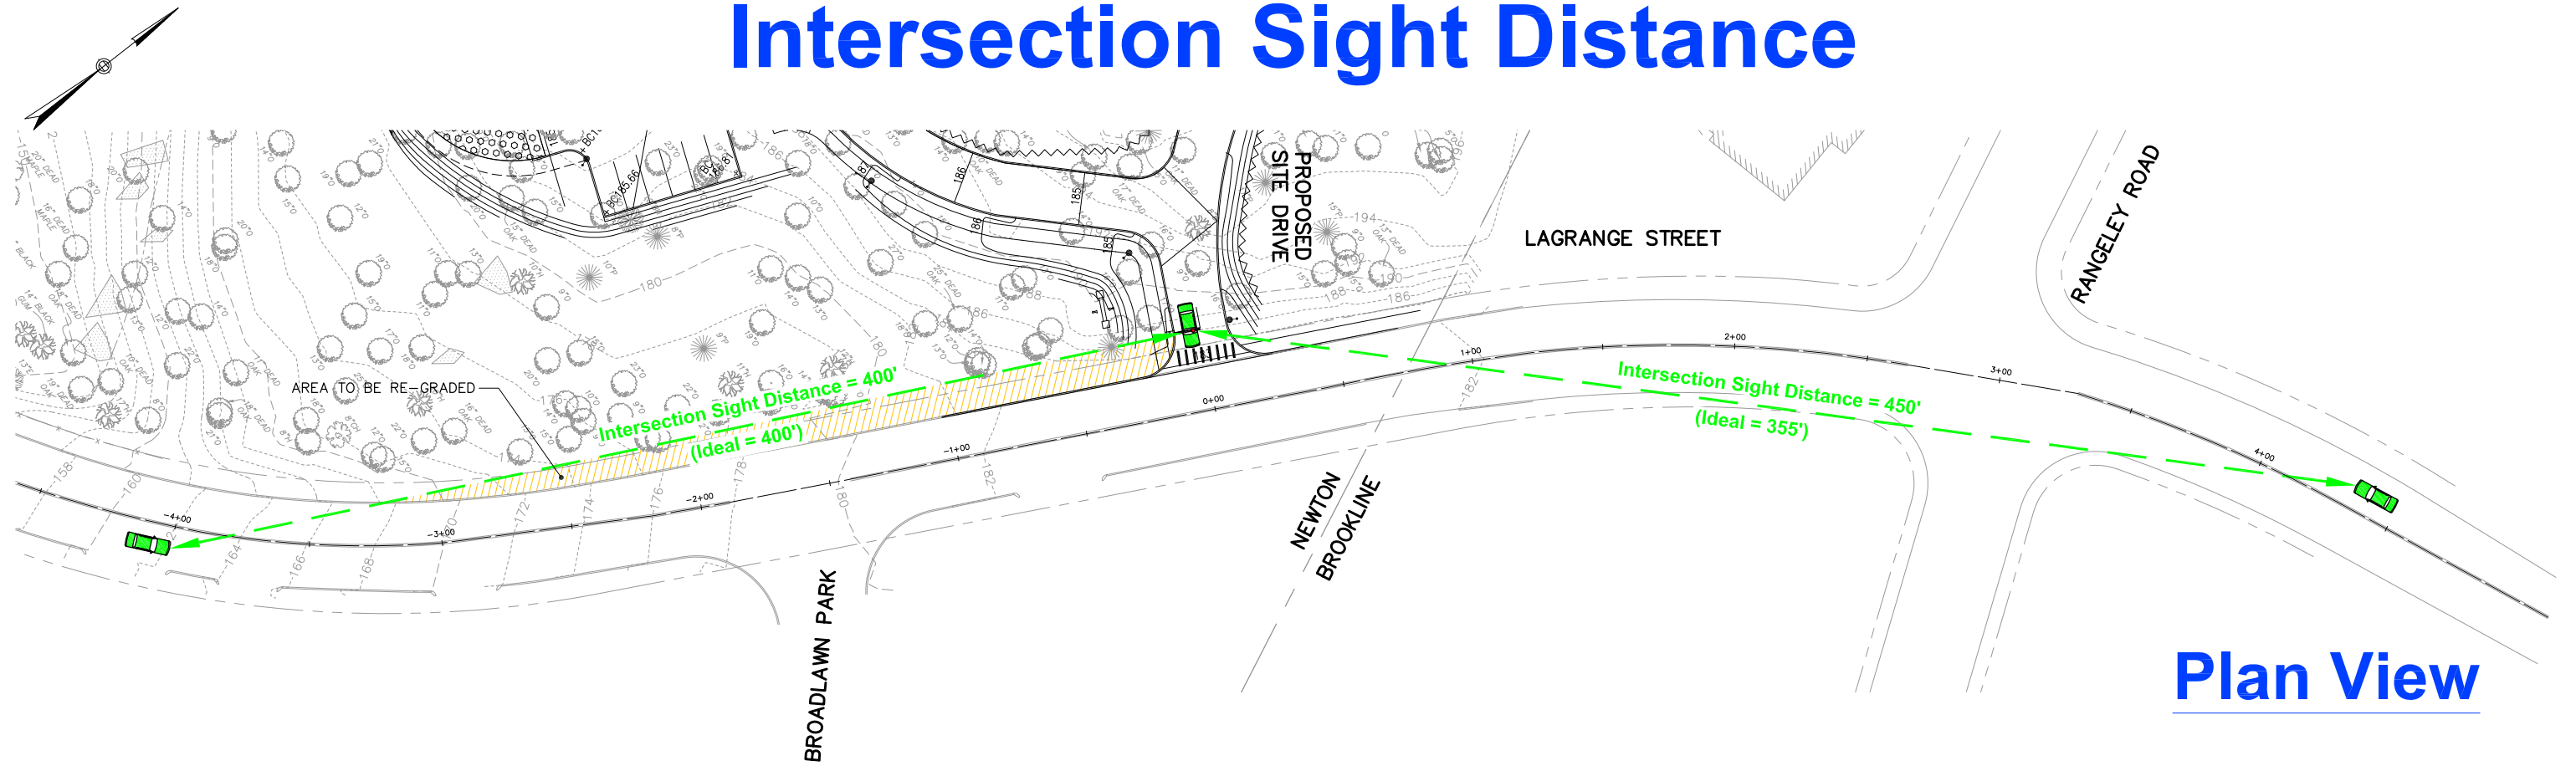

³Assumes clearing of on-site vegetation and re-grading.

⁴Regulatory posted speed = 30 mph

⁵85th percentile observed travel speeds = 36 mph EB and 37 mph WB

The results of the ISD analysis presented in **Table 3** indicate that with clearing and grading associated with construction of the proposed site driveway, the available sight lines looking east and west from the driveway onto Lagrange Street will exceed the recommended minimum (safety based criteria) and ideal (convenience based criteria) sight line requirements from AASHTO for the posted speed limit and 85th percentile travel speeds. MDM recommends that any new plantings (shrubs, bushes) or physical landscape features to be located within driveway sight lines be maintained at a height of 2 feet or less above the finished roadway grade to ensure unobstructed lines of sight; current site plans are consistent with this recommendation. The ISD profiles looking east and west onto Lagrange Street from the proposed site driveway, based on a topographical survey and field measurements, is shown in **Figure 3**.

CONCLUSIONS

In summary, this evaluation confirms that stopping sight distance (SSD) for the eastbound and westbound Lagrange Street approaches to the proposed site driveway and proposed crosswalk exceed AASHTO's recommended SSD criteria for both travel directions along Lagrange Street based on the regulatory speed limit and measured 85th percentile travel speeds. Proposed driveway and roadside grading along the north side of Lagrange Street will also provide intersection sight distance (ISD) that meets or exceeds the minimum recommended and ideal recommended sight line criteria for the posted and 85th percentile travel speeds. MDM recommends that any new plantings (shrubs, bushes) or physical landscape features to be located within driveway sight lines be maintained at a height of 2 feet or less above the finished roadway grade to ensure unobstructed lines of sight; site plans by others will be updated to reflect this recommendation.

Stopping Sight Distance (SSD) - Source: AASHTO

SSD = Reaction Distance + Brake Distance

Reaction Distance = $1.47 \times t \times V$

Brake Distance = $V^2 / (30 \times ((a/32.2)+G))$

Where:

t = reaction time (sec)

V = travel speed (mph)

G= roadway grade

a - deceleration rate (ft/sec²)

Stopping Sight Distance

Average Observed Travel Speeds

Intersection Sight Distance Calculations

Source: *A Policy on Geometric Design of Highways and Street, 6th Edition*; AASHTO; 2011.

$$ISD = 1.47 * V * t$$

V = speed

t = time gap

t = 7.5 s for a passenger car for Left Turn from a Stop

t = 6.5 s for a passenger car for Right Turn from a Stop

Posted (Regulatory) Speed Limit

Proposed Site Driveway ISD = $1.47 * 30 * 7.5 = 331$ ft **SAY 335 ft**
(left-turn from a stop)

Proposed Site Driveway ISD = $1.47 * 30 * 6.5 = 287$ ft **SAY 290 ft**
(right-turn from a stop)

Observed 85th Percentile Speeds

Proposed Site Driveway ISD = $1.47 * 36 * 7.5 = 397$ ft **SAY 400 ft**
(left-turn from a stop)

Proposed Site Driveway ISD = $1.47 * 37 * 6.5 = 354$ ft **SAY 355 ft**
(right-turn from a stop)
